Points requiring clarifications in relation to the Request for Proposal No**. 72 "Secured Transaction Registry for SECP"**

S#	Clarification/ Information Required	Comments
1	Can the mandatory criteria (Annexure 'C' clause 1.2) be relaxed for the vendors who do not have a product ready to be deployed and are planning to develop one? Annexure C, Clause 1.2: "Bidder must have a readily available secured transaction software solution that has been implemented within the past 5 years in minimum two jurisdictions, that conforms to international best practices, and that Bidder can modify to meet the specific requirements of SECP. "	It is a mandatory criteria for qualification and the vendors who have a product ready and implemented in at least 2 jurisdictions within last 5 years-time will be eligible for technical evaluation. Vendors not having the minimum requirements will get dis-qualified.
2	Are there any existing records? And will there be an efforts required on migration of legacy data ?	There are records with the partners (banks, insurance companies etc.), which will be required to digitize the records on their own using the STR interface designed for them. The vendor will not have to do a legacy data migration activity. However, there is a requirement in RFP under "scope of work" page '15': "The bidder is required to run and operationalize the application on the base-line hardware, software application and licenses (details of which will be provided in the pre-bid meeting or upon receiving questions from

		the bidders). This is required in-case SECP does not have the optimal requirements in place.
		The bidder will be required to re-deploy the application software at a later stage from base-line to optimal infrastructure (if need be). More information around this point, if required, will be furnished in the pre-bid meeting."
		In the above mentioned condition of 're-deploy', vendor will be required to migrate the application and data from base-line to optimal infrastructure.
3	Are there any integrations involved with other systems at SECP?	Yes, There will be integrations involved which should include but not limited to: 1. NADRA system 2. SECP payment gateway partners 3. Company Registry (in future) Etc.
4	What is the planned go-live target date for the STR?	Kindly refer to "task 1.a" in 'Deliverables' section on page 18 of the RFP; the go-live date is 15 April 2020.
